TECHNICAL SKILLS

- **Programming Languages:** HTML, CSS, JavaScript, TypeScript, PHP, SQL
- **Full-Stack & Frontend Frameworks:** Laravel, Next.js, React, Vue.js
- **Backend & Runtimes:** Node.js
- **CSS Frameworks:** Tailwind CSS, Bootstrap
- **Payment Gateways & APIs:** PayMongo Sandbox
- **Databases & Cloud Platforms:** MySQL, MariaDB, Supabase
- **Developer Tools:** VS Code, Git, GitHub, Jira, Zoho
- **AI-Assisted Dev:** Claude Code (Feature Architecture & Reverse Engineering)**,** Cursor (Workspace Debugging & Protocol Alignment), CodeRabbit (Pre-Merge Code Review & Testing for Staging)

OBJECTIVES

Software Engineer with hands-on experience across the full stack — Laravel/PHP backends, React/Vue/TypeScript frontends, and MySQL/Supabase data layers. Proven ability to ship production features, own QA workflows, execute database migrations, and architect academic repository systems from design through deployment. Focused on building accessible, workflow-optimized software that meets real institutional requirements.

WORK EXPERIENCES

- **Pre-Service Teacher** | Manggahan High School **(***September 2026-Present)*
  - Front-End Instruction: Delivered hands-on instruction in front-end web development, teaching semantic HTML5 and CSS through hand-coding in a plain text editor (Notepad) to build strong command of core syntax and page structure.
  - Engineering Best Practices: Taught clean-code standards, consistent naming conventions, and organized project and file management to build readable, maintainable codebases.
  - Project Delivery: Guided students in building a website for Manggahan High School from start to finish. Each student made their own design and followed good coding practices along the way.
  - Team Collaboration: Taught students to work together, think through problems on their own, and help each other finish the project.

- **Software Engineer Intern** | Argon Software *(October 2025 – August 2026)*
  - Feature Delivery: Contributed to a Next.js/TypeScript web application, delivering feature fixes and performance improvements across the codebase.
  - Quality Assurance: Owned end-to-end QA and defect resolution across staging environments to ensure stable, production-ready releases; authored unit tests in Pest PHP for feature-level validation during development.
  - Database Management: Executed migrations and schema updates for Laravel backends, maintaining strict data integrity across iterative development cycles.
  - Team Collaboration: Streamlined version-control workflows by resolving complex merge conflicts and actively participating in peer code reviews.

- **Work Immersion Internship** | Muzon Elementary School *(March 2023)*
  - Provided IT support and assisted with the maintenance of internal educational technology systems.
  - Developed foundational communication and problem-solving skills within a professional workplace environment.

PROJECTS

- **Vault-77 (Argon Software Internship | Next.js, TypeScript, Supabase)**
  - Resolved critical security gaps across payment and order APIs by verifying order ownership before accepting payment-proof uploads, enforcing session-based authentication on cart/wishlist endpoints instead of trusting client-supplied user IDs, and closing an unauthorized guest order-lookup vulnerability
  - Strengthened platform reliability and code quality by upgrading core dependencies, eliminating hidden TypeScript build errors, making checkout order, stock, and promo updates atomic to prevent partial/failed orders, and migrating the Wishlist feature to persistent, cross-device backend storage
  - Led QA validation and staging deployment of merged pull requests, resolving merge conflicts, clearly separating sandbox/test payments from live transactions in the admin dashboard, tightening environment-variable validation, and removing sensitive debug logs to prepare the platform for production readiness

- **RTU RePo (Thesis Prototype | PHP, Bootstrap 5, MySQL)**
  (https://github.com/spidaniel45/RTU_RePo.git)
  - Designed and built a centralized academic repository system for theses, capstones, and technical papers with role-based CRUD permissions (Admin, Librarian, Research Expert, User) and strict access controls by utilizing Waterfall Model.
  - Engineered dynamic dashboard modules with Year/Month/Day filtration for Pending, Approved, Rejected, and Archived studies, paired with an automated upload workflow featuring metadata auto-scan, keyword tagging, and hierarchical categorization (College → Course → Major).
  - Delivered a polished, responsive Bootstrap 5 experience with librarian-controlled archiving overrides, aligned search/upload filtering, smoother login/signup flow, and refined, non-overlapping layouts across the platform.

- **SPC Project (Argon Software Internship | Laravel, Pest PHP, MySQL)**
  - Performed QA and defect resolution to strengthen application reliability; authored unit tests in Pest PHP for feature-level validation during development.
  - Built UI/UX components and managed code versioning through Git/GitHub in strict adherence to Laravel best practices.

TRAININGS AND CERTIFICATIONS

- Computer Systems Servicing NCII *(Completed 2026)*
  MindTech Training & Development
  Institute, INC. Pasig, City

HIGHEST EDUCATIONAL ATTAINMENT

- Tertiary — Rizal Technological University
  Bachelor of Technical-Vocational Teacher Education –
  Major in Computer System Servicing
  Boni Ave, Mandaluyong, 1550 Metro Manila
  Expected Graduation: 2027

CHARACTER REFERENCE

- Joyce Hanna Regondola
  Head of Human Resources and Finance | Argon Software
